OUR VISION
YOUR FUTURE

THE LEAN IT GROUP

PREPARE FOR DIGITAL TRANSFORMATION

OUR IT STRATEGY FOCUSES ON BEST PRACTICES

IT-enabled services add value if IT delivers what the business demands and expects. We facilitate the adoption of IT best practices focusing on adding value to your business stakeholders through the implementation of a service value chain.

Our approach deepens a trusted relationship between business stakeholders and IT service providers. It focuses on what is most relevant for the business, reaching their goals.

Your organization does not have to tie itself to a single framework or best practice to achieve operational excellence. Because your organization is unique, so are their needs. Let us help you identify the 'best of breed' methods that will make information technology valuable for the business.

Lean IT Group, LLC is a corporation registered in the State of Florida, USA. with over 17 years experience. The firm is an Accredited Training Organization (ATO) for ITIL®, COBIT® and DevOps.

THE FUTURE OF DIGITAL SERVICES IS BUILT ON ITIL 4

ITIL 4 reflects the complexities of modern business technology. Provides a guide to managing IT in the new service economy, and introduces new ways of working and emerging practices. Encourages a shared culture with Agile and DevOps, ensuring IT-enabled services deliver the highest possible value to business stakeholders.

CONTINUOUS DELIVERY, COLLABORATION AND LEARNING - THE PILLARS OF DEVOPS

DevOps is not a framework or methodology. It is a cultural and professional movement that stresses collaboration between software developers and IT operations to ensure continuous delivery and deployment responding to the business needs. It encourages transparency, shared responsibilities, and learning for failures.

VALUE REALIZATION, DIRECTION, PERFORMANCE AND COMPLIANCE AT THE CORE OF COBIT

COBIT considers the information technology that businesses put in place to achieve their goals, regardless of where this happens in the enterprise. It is not limited to the IT department of an organization but certainly includes it. COBIT provides a governance model that helps delivering value from IT while managing risks effectively. Governance sets direction, management make it happen.

OKR IS THE NEW BLACK FOR CONTINUOUS IMPROVEMENT

OKR stands for **O**bjectives and **K**ey **R**esults. It is a goal-setting framework that, unlike the traditional measurement model, ensures that everyone in the organization is going in the same direction, with clear priorities, in a constant rhythm. Key Results have to be quantitative and measurable. If it does not have a number, it is not a Key Result.
